Current Challenges X

Canile Sante Marie

Current Challenges

- **platform dependency:** reliant on social media (Facebook and Instagram)
- **lack of structure:** no way to filter dogs in the feed
- **data decay:** older posts get buried and outdated (i.e. after adoption)
- **human processing:** handle all inquiries through a single google forms

My idea

Current Challenges

Project vision

Canile Sante Marie

Project vision

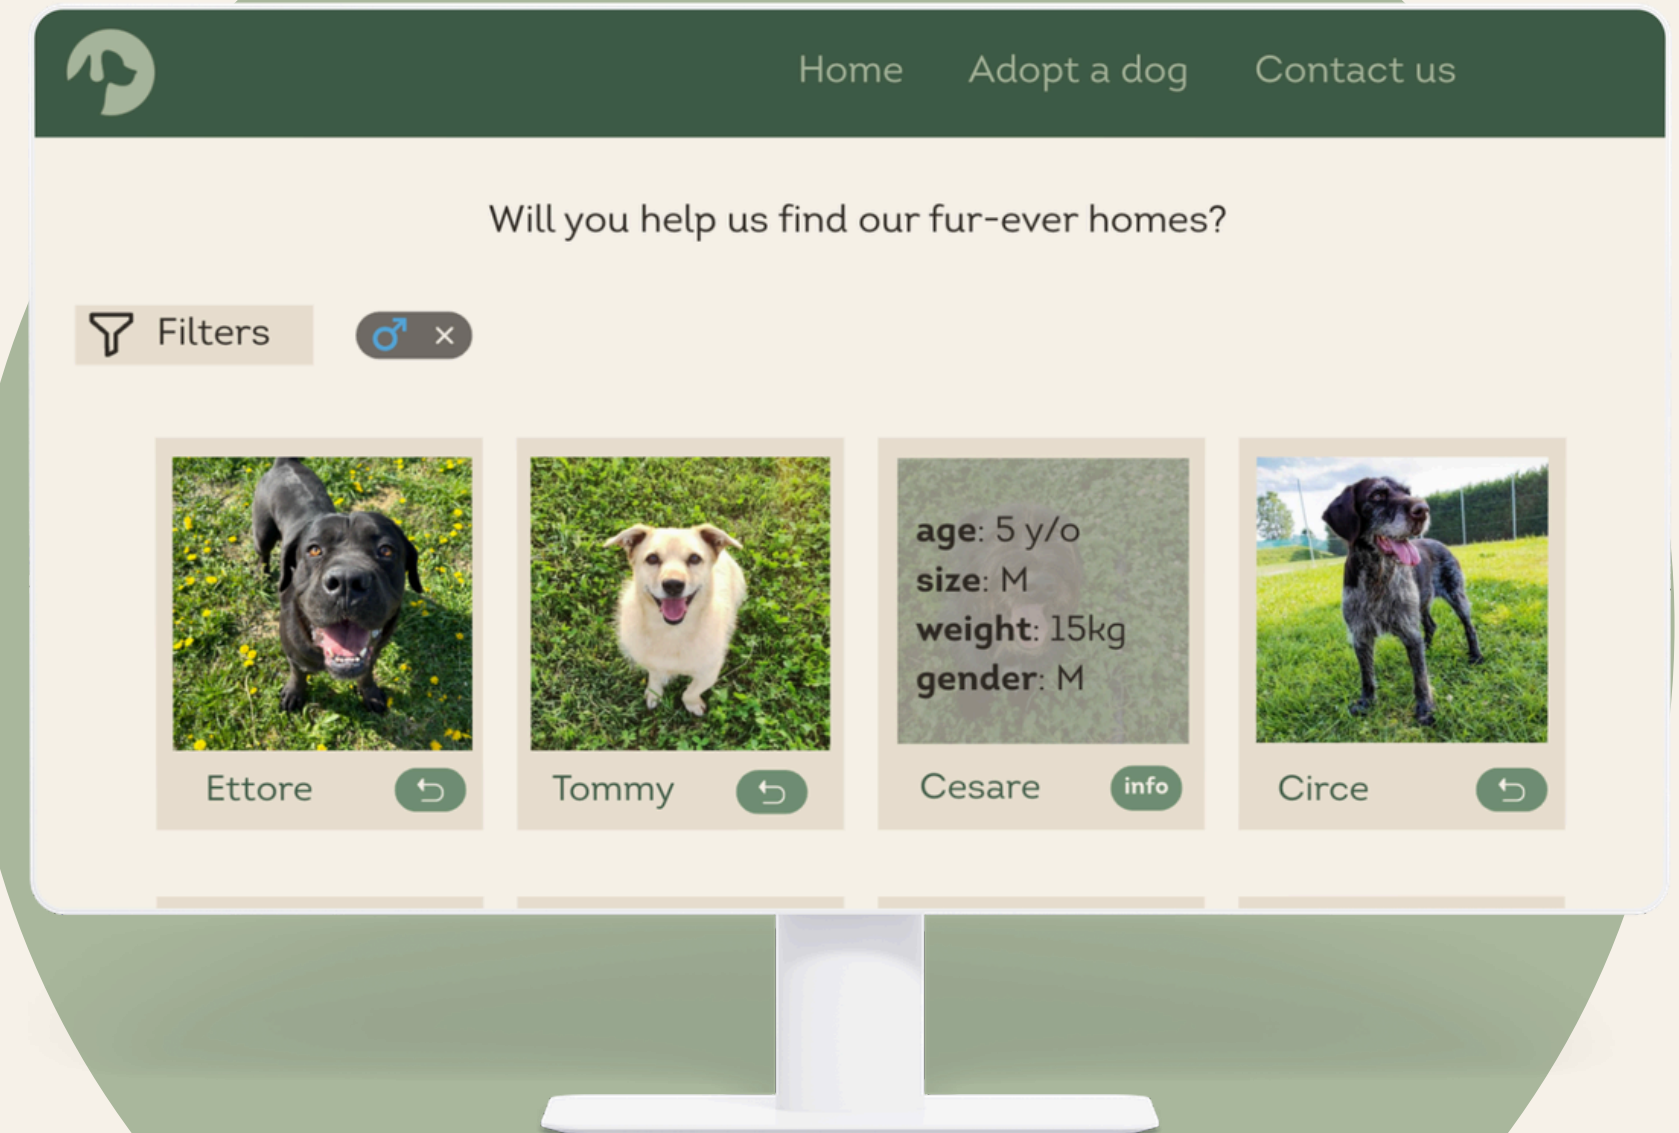

a dedicated platform

core concept:

a centralized, searchable database of all dogs currently up for adoption

primary goals:

- accessibility: easy access to information
- efficiency
- conversion: inquiry directly on the website

Will you help us find our fur-ever homes?

inquiry		

Hi I’m Tommy!

My absolute favorite thing is playing chase in the fenced yard with my foster siblings. I’m fast and love to zoom around!

I’m looking for a forever home where I can feel safe, loved and part of the family. I’ll need a secure, fenced-in yard to play safely and a would do best in a home with a friendly, confident dog.

Hope to zoom into your life soon!

Implementation

Canile Sante Marie

Implementation roadmap

1. **Development** of core architecture with sample data
2. **Real world integration:** gather and process official shelter data during the semester break
3. Adapt to shelter **requirements**
4. **End goal:** create an easy-to-use CMS so volunteers can add and remove dogs with no technical knowledge

DANKE FÜR EURE AUFMERKSAMKEIT

THANK YOU!
